

Build an Empire State of Mind

Why Choose Biolabs@NYULangone?

As every startup entrepreneur knows, launching a company is not an easy task. Besides negotiating the license agreement, finding capital, and hiring a team, there's also the challenge of finding lab space and purchasing equipment - which typically happens only after funding is secured and the milestone-clock starts ticking.

As entrepreneurs and investors ourselves, we have been through this many times and know firsthand the pain-points that startups face. We designed BioLabs@NYULangone to be the premier co-working space for life science startups - a unique place in which to test, develop, and grow game-changing ideas.

Our goal: to create an ideal community in which to launch a small company. We aim to surround members with the best people, infrastructure, and a wealth of resources to accelerate scientific achievement and business growth.

We help you quickly meet infrastructure and equipment needs so you can focus on advancing your science and building your company, not building your lab.

Our experience in building similar facilities has given us strong insights into the best practices for developing and growing early-stage companies. Our success has led to a nationwide network of facilities in other key markets, including Boston, North Carolina, Cambridge, Princeton, Philadelphia, Los Angeles, San Diego, and the Bay Area...
